

AERZEN

POSITIVE DISPLACEMENT BLOWERS

New Aerzen Positive Displacement Blower Units
Delta Blower Generation 5
Intake volume flows from 30 m³/h to 5.400 m³/h

It's new and
individual!

**AERZENER MASCHINENFABRIK
G M B H**

G1-068 | 02 | EN

2500 5.2010

Aerzener Maschinenfabrik began making positive displacement blowers in 1868 and is proud to be one of the oldest and largest manufacturers worldwide, with a market leading position in Europe. Technical competence, experienced staff and constant dialogue with our customers maintains the basis for the successful developments that originate from Aerzen.

Our priority is that the customer benefits and because of these innovative products Aerzener Maschinenfabrik can guarantee that plant manufacturers and end users alike can secure their market success in the long and short term.

Customers Benefit from Technical Progress

The Delta Blower Generation 5 is the synthesis of the successful characteristics developed in previous generations combined with new technical innovations that already meet the market requirements of the future.

Why Generation 5?

Aerzener Maschinenfabrik was the first blower manufacturer to design a compact unit in 1960 and has developed this machine type continuously ever since.

Delta Blower Generation 5 is therefore the fifth generation of Aerzen blower units and represents the successful combination of tradition and innovation. However compared to other blower models this new series offers 5 main advantages for the customers. 5 main advantages which led to the name „Generation 5“.

➤ Lower Sound Levels

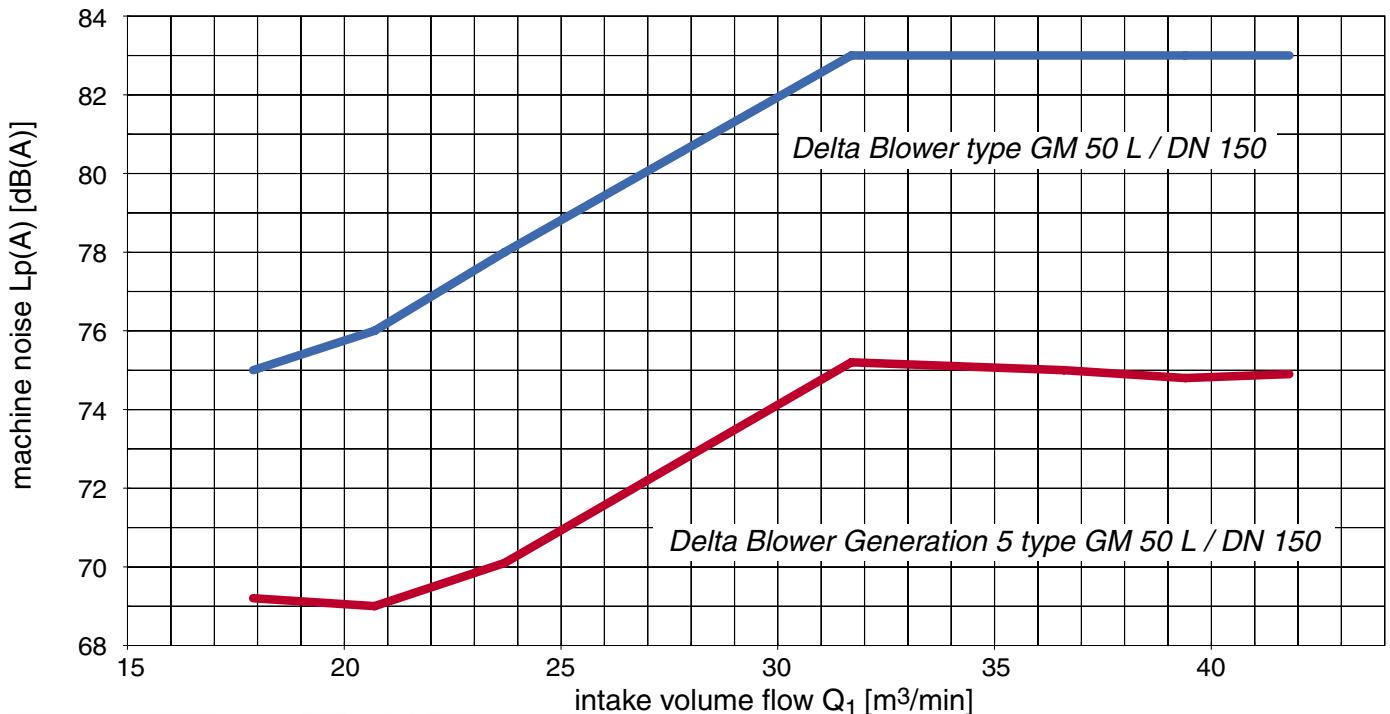

Compared with the previous generation the sound levels of the Delta Blower Generation 5 series have been reduced by an average of 6 - 8 dB(A), in some single cases even lower sound levels have been achieved.

We still consistently and aware no longer used the absorption material in the discharge-sided silencer.

Due to these considerable sound reductions, expensive measures, such as special acoustic hoods are no longer required.

Generation 5 is quieter! On average the sound pressure levels of the machine noise has been reduced by 6 – 8 dB(A) compared to the previous models.

Comparison of sound pressure levels (700 mbar with acoustic hood)

Easy operation and maintenance:
Transport with fork lifters and lifting trucks, the maintenance work 'oil' and 'filter' are carried out from the front.

The oil level control can be viewed from the outside when blower is running.

➤ Simple Operation and Easy Maintenance

During development, special consideration was given to the ease of handling of the new units. The first consideration was easy positioning and installation: The units can be transported at site, by means of a suitable fork or (up to DN 125) pallet truck. They are delivered with a service pack that includes a lifting jack, oil funnel and an initial fill of oil, which also makes commissioning very easy. All service tasks and components that require maintenance are accessible from the front of the unit.

However, the important advantage is the new oil system. The oil level can be viewed and checked from the outside with the blower fully operational, this is possible without any problems. Therefore, blower shutdowns, process and production interruptions belong to the past. The most important advantage is however the new oil system. This makes a check of the oil level possible from the outside with the machine running. Necessary shutdowns of the machines and consequently interruptions of the process or the production thus belong to the past. Size DN 50 is the only exception. Due to the small dimensions the oil service can easily be carried out via the detachable acoustic hood roof.

Generation 5 - Simply Operate!

During development special attention was given to the easy application of these units.

➤ Mechanical Fan

A mechanical fan mounted on the blower drive shaft is used to ventilate the acoustic hood. Without the need for an electric fan additional electrical installation and energy costs are saved.

An additional advantage for this system is that it fully complies with all ATEX requirements. Expensive ex-proof fan motors are not required - a considerable cost saving.

➤ Absorption Material Eliminated

The base for the Generation 5 blower is also the discharge silencer in which the sound level is reduced by diverting the air flow. Absorption material which is subject to degradation has not been used in any part of the unit. The downstream system cannot become contaminated when it is used for pneumatic conveying of bulk food materials and the integrity of the foodstuff is guaranteed. In the sewage industry, the blockage of an aeration system can be avoided; costly maintenance expenditure is minimized and production losses are eliminated.

➤ Space Saving Design

Especially with the smaller size units the dimensions have been reduced, linked with the facility to install the units "side by side", the required floor space has also been considerably reduced. Providing further cost savings in designing the size of the blower room.

Due to the changed dimensions and type of design there is a better possibility of replacement regarding the previous Aerzen generations KI, KII and KIII.

Further advantages of the new series Delta Blower Generation 5 are the following:

- Aerzen base support certified as spark arrester for ATEX-applications (please also refer to brochure A1-020)
- Blower stage with patented procedure for pulsation reduction
- Standard application for energy-saving motors of class EFF1
- Compliant as per the PED guidelines (discharge silencer and pressure valve)
- Intake on the 'cold' side of the unit
- Automatic belt retention due to hinged motor mounting plate

12 sizes in 7 nominal widths

Less room needed due to compact design and installation variant 'Side-by-Side'.

Generation 5 uses a mechanical fan!

This is mounted on the blower shaft and, therefore, does not need any additional absorbed power or electrical installation costs.

Scope of supply:

Blower stage (1)

With patented procedure for pulsation reduction (see page 6)

Base support with integrated discharge silencer (2)

Sound dampening without using absorption material. Design of silencer acc. to PED-directive 97/23/EG. Furthermore the base support is certified as ATEX-spark arrester.

Intake system with filter and silencer (3)

The machine takes in as standard from the ambience. An intake via a pipe is possible (option).

Drive

By means of three-phase current AC – motor (4) via high-efficiency narrow V-belt drive (5). Use of energy efficient motors of class EFF1 (up to motor size 315) in series. Automatic belt tension via hinged motor mounting plate (6).

Connection housing (7)

With pressure relief valve (8) acc. to PED-directive 97/23/EG and with integrated non-return flap

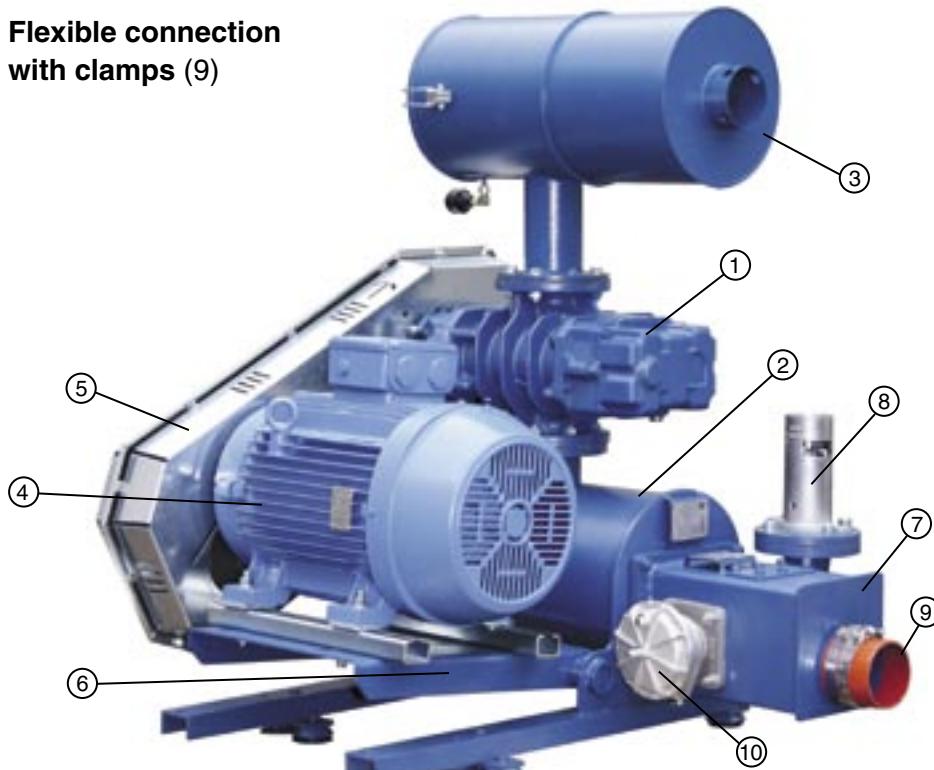

Flexible connection with clamps (9)

Accessories:

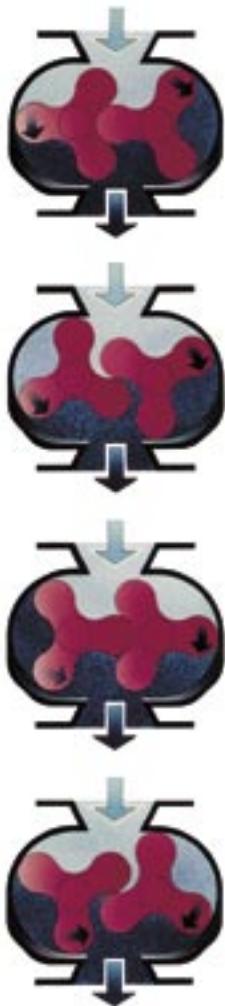

- Driving motor: type of construction B3, junction box on top
- Acoustic hood for indoor or outdoor installation, with forced ventilation via mechanical fan
- Start-up unloading device (10): necessary for star-delta starting of the motor
- Pressure gauge for indication of the conveying pressure
- Maintenance indication for monitoring of the intake filter
- Discharge-sided expansion joint instead of flexible connection
- Switch cabinet
- Aerzen blower control system AERtronic
(For detailed information refer to leaflet AS 300)

Further accessories upon request!
Our Sales dept. will of course be prepared to give you advice!

Generation 5 does not use any absorption material! In the Aerzen base support which also acts as the discharge silencer - the sound is simply reduced by air deflections.

Patented pulsation reduction at the “source of their origination”

Each of the new Delta Blower units feature a blower stage with internal pulsation cancellation.

Two-Lobe Blowers operating on the Roots principle produce conveying pulsations due to their design, which can be detrimental not only to the blower itself but also to the conveying pipework.

Using a patented development by Aerzener Maschinenfabrik, these pulsations are almost eliminated at source. To achieve this the three-lobe blower has two channels cast into the cylinder wall that control the backstream of gas into the cylinder. This backstream produces sound waves which by interference cancel most of those produced by the blower.

Rotors:

GM 3 S to GM 80 L: drop forged in one piece including the shafts (C 45 N).

GM 90 S and GM 130 L: rotors and shafts in one piece of EN-GJS-500-7.

GM 150 S to GM 240 S: made of EN-GJS-400-18-LT, shafts made of C 45 N.

Cooling

Convection cooling via the housing surface is adequate for blowers operating within their thermal range as shown in the performance tables.

Lubrication

Bearings and timing gears are splash lubricated.

Oilfree conveying (Sealing)

The conveying chamber (cylinder) is sealed from the gear case and the front cover by piston ring labyrinth seals. These seals have a central, neutral chamber which is open to the atmosphere.

Timing Gears

The helical timing gears are hardened and ground. They are fitted to the shafts by the oil expanded taper method.

Construction and Manufacture

Blower

The blower has three-lobe rotors and the cylinder housing has pre-inlet channels to reduce sound emissions through pulsation cancellation. The cylinder, end plates and covers are made of EN-GJL-200.

The blowers are cast with ribbed surfaces.

Fields of application and use

Aerzen blower units are designed for the conveying of air and neutral gases.

At present, the series Delta Blower Generation 5 is available for overpressure and vacuum applications with nominal widths of DN 50 to DN 250. Further designs (vacuum, nitrogen) are available. Using a flexible modular construction and a belt driven system makes it possible for all blowers and motor sizes to be installed, within a nominal range. Therefore, achieving an optimum adjustment to match the blower output and power consumption.

Future modifications are also possible. For the new series Generation 5, 12 sizes are available for intake volume flows from approximately 30 m³/h to 5.400 m³/h and overpressures up to 1000 mbar.

The entire series Delta Blower includes 16 sizes and volume flows up to 15.000 m³/h.

Examples for the various fields of application:

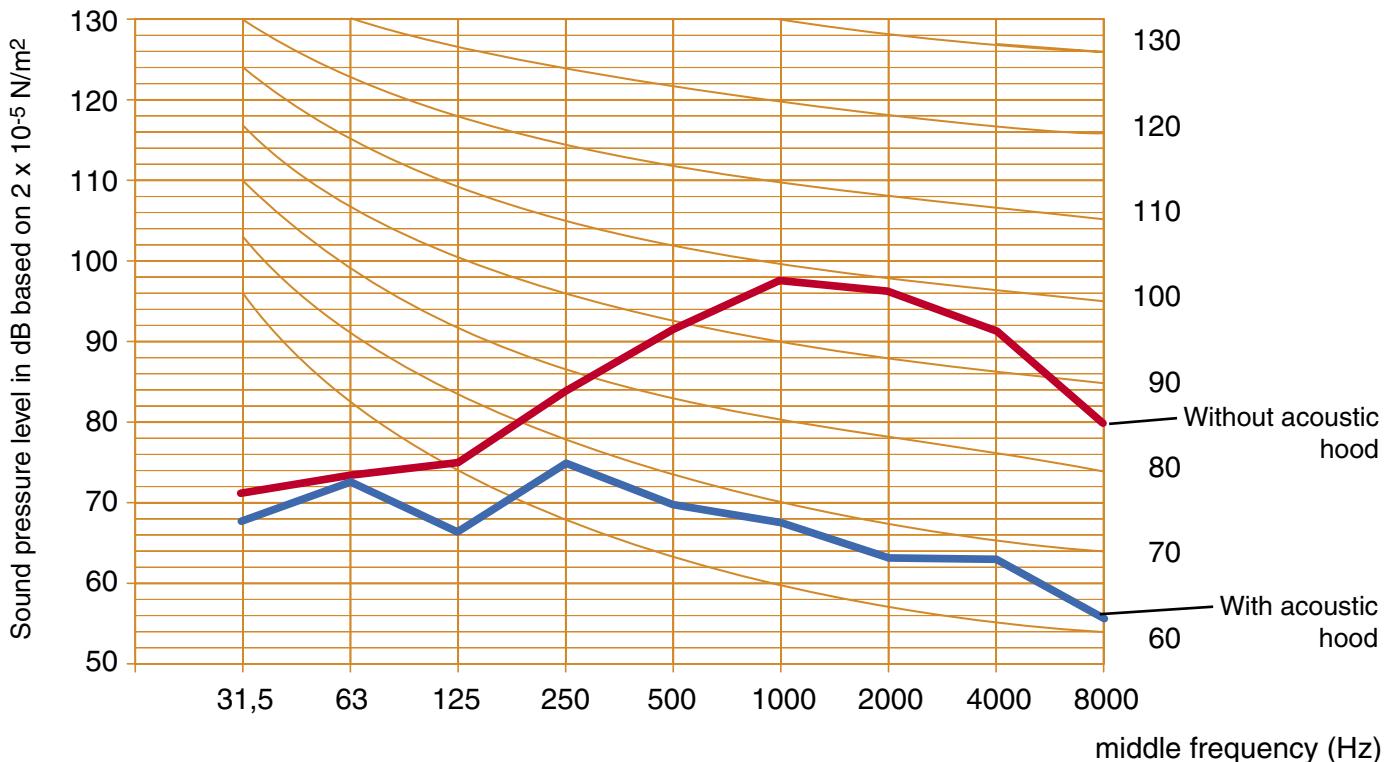

- Pneumatic conveying of bulk materials
- Sewage water purification
- Drinking water treatment
- Aeration of rivers and lakes
- Chemical and processing industry
- Glass and paper industry
- and many more

Noise rating

The sound frequency analysis was carried out in 1/1 Oktave Band on a GM 30 L - G 5

measured in free field conditions at one meter from the outline and a height of 1,5 meter.
 $\Delta p = 600 \text{ mbar}$,
 Blower speed = 3800 rpm

Using the operating data sheets

Please refer to the data sheets for intake volume (\dot{V}_1), absorbed power (P_k), motor size and sound pressure levels $L_p(A)$.

The intake volumes shown correspond to operating speed increments of approximately 12% and are based on commonly available belt drive ratios.

Lower driving speeds are possible, depending on the final temperature.

Concerning data please refer to performance diagram.

Noise level guarantee

All noise data are based upon machine emitted noise pressure level $L_p(A)$ from each single blower unit. They refer to free field measurements (Tolerance $\pm 2 \text{ dB}$) as per DIN 45635, DIN EN ISO 3744 and DIN EN ISO 2151 at a distance of 1 m.

Data	Legend	
\dot{V}_1	[m ³ /min]	intake volume

Lower differential pressures on request

Generation 5 saves space! Especially with the smaller sizes the dimensions have been reduced and an installation variant 'Side-by-Side' is also possible.

Dimensions – DELTA BLOWER – GM 3 S

- 100 positive displacement blower
- 610 base frame
- 611 connection housing DS with integrated non-return flap
- 613 anti-vibration mountings
- 620 hinged motor plate
- 1810 electric motor
- 2110 belt drive
- 2410 belt guard (only in case of installation without acoustic hood)

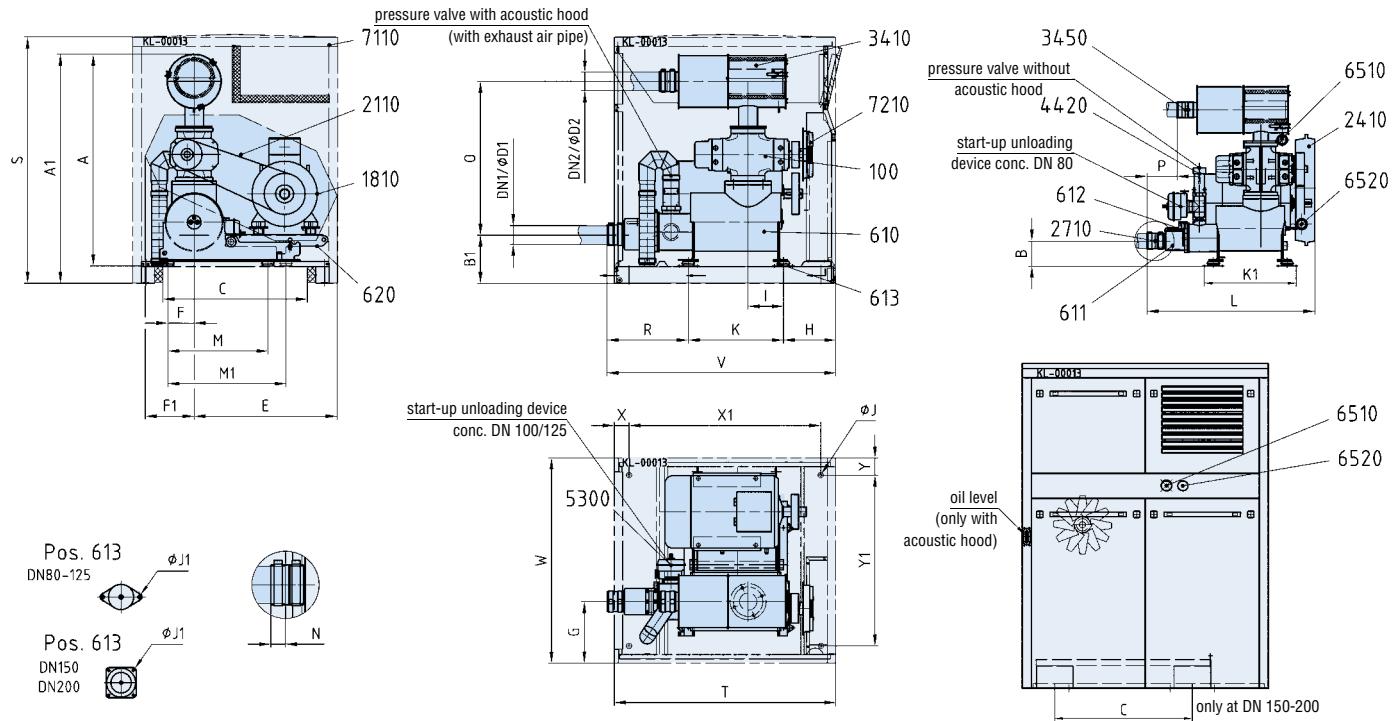

- 2710 flexible pipe connection DS
- 3410 filter silencer
- 3450 flexible pipe connection SS (accessory)
- 4420 pressure relief valve
- 5300 start-up unloading device (accessory)
- 6510 maintenance indicator (accessory)
- 6520 pressure gauge (accessory)
- 7110 acoustic hood
- 7210 fan

Weight without motor

Generation 5 is quieter! On average the sound pressure levels of the machine noise has been reduced by 6 – 8 dB(A) compared to the previous models.

Dimensions – DELTA BLOWER – GM 25 S to GM 50 L

- 100 positive displacement blower
- 610 base frame
- 611 connection housing DS
- 612 integrated non-return flap
- 613 anti-vibration mountings
- 620 hinged motor plate
- 1810 electric motor
- 2110 belt drive
- 2410 belt guard (only in case of installation without acoustic hood)

- 2710 flexible pipe connection DS
- 3410 filter silencer
- 3450 flexible pipe connection SS (accessory)
- 4420 pressure relief valve
- 5300 start-up unloading device (accessory)
- 6510 maintenance indicator (accessory)
- 6520 pressure gauge (accessory)
- 7110 acoustic hood
- 7210 fan

Weight without motor

Generation 5 uses a mechanical fan!

This is mounted on the blower shaft and, therefore, does not need any additional absorbed power or electrical installation costs.

Dimensions – DELTA BLOWER – GM 50 L to GM 90 S

100 positive displacement blower
 610 base frame
 611 connection housing DS
 612 integrated non-return flap
 613 anti-vibration mountings
 620 hinged motor plate
 1810 electric motor
 2110 belt drive
 2410 belt guard (only in case of installation without acoustic hood)

2710 flexible pipe connection DS
 3410 filter silencer
 3450 flexible pipe connection SS (accessory)
 4420 pressure relief valve
 5300 start-up unloading device (accessory)
 6510 maintenance indicator (accessory)
 6520 pressure gauge (accessory)
 7110 acoustic hood
 7210 fan

A good address - everywhere

A central point of the Aerzen company policy is the local presence at the customers.

- 7 sales offices in Germany
- 1700 employees worldwide
- more than 30 international subsidiary companies
- representations for more than 100 countries
- more than 100 service technicians on all continents

are the guarantee for competent contact partners nearby and with the corresponding national language.
